MIKE WOODCOCK

Deep Learning and Machine Learning In Production

Expert in AI and deep learning with a strong track record in leading and implementing AI initiatives. Having recently led the AI & Engineering departments at a unicorn startup, I now advise and build production-grade AI systems for growth-stage companies, leveraging state-of-the-art technologies to enhance operations and deliver impactful results. I have worked on key AI projects with Ford, Porsche, and others delivering critical and strategic projects. Known for implementing transformative strategies and driving significant process improvements.

EDUCATION

OXFORD MACHINE LEARNING SUMMER SCHOOL
University of Oxford / AI for Global Goals / CIFAR
Jul 2021 – Aug 2021

MSC. ARTIFICIAL INTELLIGENCE (WITH MERITS)
University of Edinburgh
Sep 2018 – Sep 2019

BA MATHEMATICS (HIGH PERFORMANCE AWARDS)
National University of Colombia
2015 – 2017 (not finished)

BA ECONOMICS (WITH MERITS)
National University of Colombia
2014 – 2017

BA SYSTEMS ENGINEERING (HIGH PERFORMANCE AWARDS)
National University of Colombia
2012 – 2014 (not finished)

RELEVANT EXPERIENCE

INDEPENDENT AI & ENGINEERING CONSULTANT - (FEB 2026 – PRESENT)
MULTIPLE CLIENTS - Berlin, Germany

Providing AI strategy and engineering leadership to early-stage and growth-stage companies, designing and shipping production-grade AI systems across media, process automation, and language-services sectors.

- **Television.AI** (Frankfurt, Germany) – Advising on and building AI-powered video editing and production pipelines for newsroom content. Built entity-identification, video semantic-knowledge extraction, and fine-tuning pipelines to capture the distinct editorial voice of individual TV channels, powering AI video-editing tools now adopted by several of Germany's leading public broadcasters.
- **Traducciones 24/7** (Bogotá, Colombia) – Building automation for online quoting and document-processing workflows to support certified translation delivery.
- **Seneca Evolution UG** (Lorsch, Germany) – Directed the technical strategy behind the company's internal financial-controlling product, combining ETL pipelines with retrieval-augmented generation (RAG) to build a per-customer knowledge base powering AI-driven search and automated financial controlling tools.
- **Audioscrape** (San Francisco - US) – Contributed to the internal audio-ingestion pipeline, scaling data-collection infrastructure to reliably source audio content across a wide range of internet platforms, many with strong anti-bot protections, feeding a searchable index of over a million hours of podcasts and recordings.

HEAD OF THE AI & ENGINEERING DEPARTMENTS - (JUN 2025 – FEB 2026)
SELLERX - Berlin, Germany

Head of AI & Engineering at one of the fastest growing startups in Europe reaching unicorn valuation 18 months after founding (*link*).

My departments were responsible for maintaining and developing all the technical infrastructure that maintains more than 100 Million euros in revenue every year for more than 100K products in Amazon, ebay, walmart, and more in 4 continents. This includes **critical** infrastructure affecting directly the PnL.

- Architect and operate mission-critical systems enabling pricing, listings, ads, inventory, and finance across global marketplaces.

INTERESTS

LLMs | Automation | AVs | Agentic AI | Multi-agent Systems | MLOps | AI Strategy & Leadership | Business Process Optimization | Strategic AI Development | RAG | Production

SKILLS

ML & Deep Learning

TF | PyTorch | CUDA | ONNX | TensorRT | Hugging Face

LLM & GenAI

LangChain | llama-index | OpenAI API | Fine-tuning | Prompt Engineering | Semantic Search | RAG

Cloud & Infrastructure

AWS | Google Cloud | Azure | K8S | Docker | CI/CD | Helm | Linux | PostgreSQL | Redis

Data & Automation

Airflow | ETL | CI/CD | Kafka | dbt | Snowflake

Perception & Streaming

Triton Inference Server | GStreamer | DeepStream | ROS | OpenCV | SLAM | Kalman Filters

- Architected a centralized internal tech hub used by ∼50% of the company.
- Maintain Airflow jobs for 5k+ pages scraped daily, 2k+ invoices processed per execution, 50k+ data rows written daily, 30+ marketplaces processed for 100+ brands.
- Automated 70–80% of demand planning (replacing a fully manual, 4-planner process), cutting forecast error (MAPE) by ∼30% (0.4 → 0.3), with the largest gains on long-tail, slow-moving SKUs where error was roughly halved.
- Reduced overstock costs by an estimated €700K+ annually (a conservative 3–4% improvement on a €15–20M overstock-fee base) through better forecasting, while freeing planner time for higher-value work.

HEAD OF AI & AUTOMATION - (SEP 2024 – JUN 2025)

SELLERX - Berlin, Germany

Drive automation with cutting-edge AI technologies, including generative AI, and LLM models, across ten markets on three continents. Achieved significant improvements in business KPIs.

- Provided strategic direction and leadership for AI, deep learning (DL), machine learning (ML), and automation.
- Led the development of a company-wide platform for centralizing and automating processes, integrating AI at its core.
- Leading the development of an advanced automation platform designed to fully manage and resolve autonomously customer service tickets.
- Leading the development of the demand planning forecasting platform covering all brands and articles company wide.

SENIOR AI ARCHITECT - (FEB 2024 – AUG 2024)

SELLERX - Berlin, Germany

Tasked with optimizing internal processes to enhance business KPIs through advanced AI technologies.

- Achieved 60% automation for customer service requests for specific topics. Managing 2k+ tickets/month, uptime of 99.9999% (six nines).
- Increased volume of new products for targeted brands, achieving a 3.5x increase in volume and a 60-80% rise in success rates.
- Improved the technical stack and practices for production and deployment in Kubernetes (K8S), AWS, and Azure.

SENIOR MACHINE LEARNING ENGINEER - (JUN 2021 – JAN 2024)

KOPERNIKUS AUTOMOTIVE (NOW COPERNICUS AUTOMOTIVE, ACQUIRED BY FORD) - Berlin, Germany

Acting as a Senior Developer with a key focus on the optimization and deployment of our DL Stack in production using K8S.

- Successfully led the development and implementation of our machine learning production pipeline.
- Delivered exceptional achievement by ensuring millimeter accuracy without reliance on lidars.
- Significantly improved the efficiency of the perception system from 20 frames per second to 200.
- Employed cutting-edge models for detection and tracking with respect to specific tasks. Substantial improvements in metrics for uncommon challenging objects.

PROGRAMMING LANGUAGES

Python (Very Proficient)
C/C++ (Proficient)
Java (Proficient)
R (Proficient)
Javascript (Proficient)
Matlab (Prior experience)
Rust (Prior experience)

HONORS

FIRST PLACE - AUTONOMOUS DRIVING COMPETITION
Formula Student 2019 - Autonomous Driving UK - (Jul 2019)

COLFUTURO SCHOLARSHIP - NATIONAL SCHOLARSHIP
Colfuturo - (Nov 2018)

SECOND PLACE - BEST RESEARCH PROJECTS
Fenadeco - (Nov 2017)

SCHOLARSHIP (6 TIMES) - ACADEMIC PERFORMANCE
Granted by the Engineering Department, by the Science Department and Economic Sciences Department - (2011-2017)

HONOUR ENROLMENT
National University of Colombia - Faculty of Economic Sciences - (Jan 2012)

PRINCIPAL ML ENGINEER (ML LEAD) - (SEP 2020 – JUN 2021)
KOPERNIKUS AUTOMOTIVE (NOW COPERNICUS AUTOMOTIVE, ACQUIRED BY FORD) - Berlin, Germany

I led the ML Team and all ML related development at the company. Worked very closely with the largest OEMs for the Automotive Industry in Germany to deliver key POCs and milestones.

- Delivered the unknown object detection (safety system) which was showcased in Munich for IAA demo in conjunction with Mercedes-Benz, Volkswagen, BMW, Jaguar and Ford.
- Led important POC projects for several of the biggest Car Manufacturers in DE and the world, including production lines for popular car models.

MACHINE LEARNING ENGINEER - (NOV 2019 – SEP 2020)
KOPERNIKUS AUTOMOTIVE (NOW COPERNICUS AUTOMOTIVE, ACQUIRED BY FORD) - Berlin, Germany

Involved in every phase of the ML lifecycle, from data collection to implementation, testing, and production deployment. Implementing and maintaining advanced perception models, emphasis on detection, localization and state estimation for Autonomous Vehicles.

More experience:

- **Assistant Researcher - Experimental Factory Laboratory**
- **Developer (Perception) - Edinburgh University Formula Student**
- **Assistant Researcher - Algorithmic and Combinatorial Research**
- **Assistant Researcher - Research Group on Artificial Life**
